

Micro Bird Starter Cable Service Update #19-0501

Starter Cable Connections Need to be Part of PM/Option #BBX-8

Micro Bird Option #BBX-8 takes the underhood battery along with the second battery ordered with the chassis and puts both batteries in a battery compartment just behind the entrance door.

To accomplish this, the positive cables from both batteries are joined at the starter stud connection with a “swedge” type connector. (Figure #1)

It has been observed that this connector, if not given proper slack to move, may actually break. Figure #2 shows the broken connector still secured to the starter solenoid stud. Figure #3 shows the cable with the other portion of the connector.

It is recommended that during a PM the cable and connector at the starter be checked along with the cable to ensure there is sufficient slack for engine movement.
