

## BBCV (Vision) Windshield Washer Reservoir

### Service Update #22-0121

Figure #1

Figure #2

### Using an incorrect reservoir can make filling a challenge

Recently we were made aware that customers said they were having a difficult time filling the windshield washer bottles on their 2022 Blue Bird Vision units. We investigated to find that there was a new reservoir (#10064620) implemented which put the fill at one end (Figure #1) due to a redesign of the air intake that put the plenum directly over the reservoir. Some early models were built with the original reservoir (#00112101) which has the fill in the center of the top of the reservoir (Figure #2).

Figure #3

Figure #4

As you can see in Figure #3, when the original tank is used, there is minimal space to even remove the cap to fill, but when the proper tank is used, see Figure #4, the cap is clear and fluid could actually be added directly from a gallon jug.

**Thank You to Mike and the guys at  
Kenmore-Town of Tonawanda UFSD  
for pointing this out!**
