FROM YOUR FRIENDS AT  
NEW YORK BUS SALES!

## Blue Bird T3FE Electrical Stud

- Complaint –** There is an air leak under the dash by the driver's feet -
- Cause –** In the group of air lines running through the firewall by the driver's feet, one has a hole in it (Figure #1). Upon further inspection the black and red covers for the power studs were found to have come off and the nut holding the electrical connectors were not tight which caused heat and the airline had laid against it causing the hole.
- Correction –** You should be checking to make sure that the protective caps are in place. As a preventative measure you should ensure the lines do not run close to the studs and that nuts are tight.

**PLEASE NOTE – If you are experiencing electrical issues such as erratic dash lights or other chassis electrical issues you may want to make sure that the studs are tight.**

**Thanks to Marty and the guys at Hilton CS for pointing this out!**
