SoundOff Signal Light Cracking

Complaint – We have had to replace SoundOff LED lights due to cracking when we know we have torqued properly and we have literally had to destroy the light taking it off due to the plastic plugs that were installed to cover the screws.

Cause – When the lights were installed, the package they were shipped with had 4 small plugs (Figure #1) which were the same color as the light and were to be placed in the mounting screw holes after the light was installed. Water which freezes in the cold and expands along with corrosion if stainless steel screws are not used have been found to cause cracking when these are installed.

Correction – Do NOT use these when replacing lights!
