

All American & Vision A/C Not Cooling Service Update #20-0702

A/C Lines Could Contact Door Mechanism

Recently we have had units come in for service and the A/C does not blow cold. When diagnostics are done, we find that the systems are not charged, indicating a leak. In locating the leak, it has been found in the panel above the entrance door.

FIGURE #1 shows the open panel above the entrance door. The red circle shows the mark in the hose and the black arrow indicates the travel of the door mechanism and how it would contact the hose. You can also see the green dye on the foil insulation.

FIGURE #2 shows one way of avoiding the issue, running lines above the door mechanism. The other way is to tie the hoses up to the body bow along the same path as the larger white wire loom.

During PM's or A/C annual servicing it is recommended to remove the panel above the entrance door and inspect to ensure the issue does not exist.
